

## DESTONING & PULPING

PROFRUIT destoning pulping machinery is used for juice & puree production from various fruits, berries and vegetable. Destoning pulping machines are perfect for stone fruits, as well as for various vegetables and berries which contain seeds.

**Destoning & Pulping Machines are designed to separate fruit and berry pulp from the stone and produce clean pulp & puree**

Destoning pulping machine consists of a screw, which is mounted in the middle, and sieve, which is attached to the sides of the machine. After fruits or berries are loaded into machine, the screw spins the products and presses them through the sieve, this way producing clear puree without any stones, seeds or peel. Stones, seeds and peel leave the machine through a special outlet. The puree comes out of machine through a separate outlet.

### Your advantages:

- With right modifications machine is suitable to process blueberries, blackcurrants, raspberries, strawberries, plums, apricots, peaches, mangoes, pomegranates, passion fruits, tomatoes, etc.
- Destoning & pulping machine functions automatically
- Machine is easy to clean with no closed or inaccessible spaces, all parts are easy to assemble
- Machine is entirely made of stainless steel and has pivoting wheels
- For further processing and thinner puree, the pulping process can be repeated with another sieve or puree can be further loaded into the pneumatic press. Puree can also be further loaded into the belt press or rotational filter

### DESTONE 500

**Destoning & Pulping Machine**  
Capacity: approx. 500 kg/h

## DESTONE 1000

Destoning & Pulping Machine  
Capacity: approx. 1,000 kg/h

## DESTONE 2000

Destoning & Pulping Machine  
Capacity: approx. 2,000 kg/h

Each machine is equipped with an integrated sieve as standard.  
Additional sieves for different applications are available as options.
