

MACHINES FOR SYSTEM ADD-ONS

PROFRUIT fruit processing machinery accessories are additional machines which can be used in fruit processing and juice production.

Screw Conveyor for Pressed Mash

Available length: 3 m, 4 m

The screw conveyor transports the resulting pomace from the press directly into a collection container or for disposal.

Juice Homogenizer

Capacity: approx. 1,000-3,000 l/h

The homogenizer reduces components and sediments in the juice to the finest particles and distributes them evenly throughout the liquid.

Juice Clarification System

Capacity: approx. 2,000 l/h

The juice clarification system removes various sediments and ensures effective clarification of the juice.

Fruit Washing Pump for Tanks

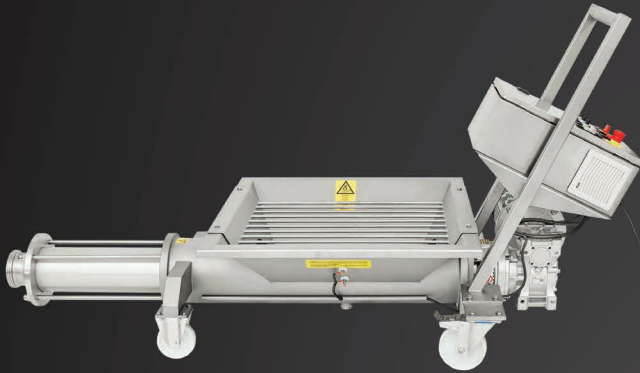

Capacity: 200 l/min at 2,5 bar

The washing pump is used for cleaning closed tanks. It enables thorough cleaning and simplifies the maintenance process.

Monopump for Fruit Mash

The mono pump transports grapes as well as various fruit, berry or vegetable mash for further processing.

40x40 Plate Filter with Pump

Capacity: 500 l/h to 10,000 l/h (when filtrating wine)

The plate filter operates with multiple layers of cellulose filter mats, through which the liquid is gradually filtered. An integrated pump ensures continuous flow.

Double Juice Filter

Capacity: 2,000 l/h

The mechanical stainless steel double-juice filters consist of two filter units operating in parallel. They can be operated independently or isolated separately for cleaning.

Rotational Juice Filter

Capacity: 1,000 l/h

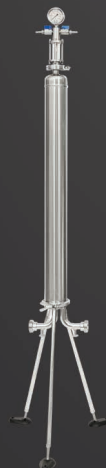

The rotary filter reliably separates pulp and sediments, producing clear juice. The stainless steel collection tank with integrated pump allows for direct transfer.

Beverage Filter

Capacity: 3,000 l/h

High-quality stainless steel beverage filter – featuring a sight glass, pressure gauge and electropolished surface. The robust stainless steel mesh is available in various fineness levels (10-200 µm) and can filter a wide range of liquids, including juice, cider, wine, sauce, broth, liqueur, beer, soap and more.

Fruit & Vegetable Dryer DRYFRUIT

Capacities: 15 kg/cycle, 25 kg/cycle, 50 kg/cycle

The DRYFRUIT fruit and vegetable dryer uses gentle condensation drying – preserving the aroma, color and taste of fruits, vegetables and other products.
